RE: Incorrect Expiration Date: Pneumovax 23 lot #J005071 – Memo 2016-1-c

VFC/AIP clinics may have received Pneumovax 23 lot #J005071 that was imported into NESIIS with an incorrect expiration date of 1/19/2016. The correct expiration date for this Pneumovax 23 lot #J005071 is listed on the label and is 1/19/2015.

Please check your NESIIS inventory to see if you received Pneumovax 23 lot #J005071 with the incorrect expiration date. If applicable, click on the Pneumovax 23 name, edit the expiration date to 1/19/15 then click save.

It is unfortunate that the information from the distributor was incorrect, and we apologize for any inconvenience this may have caused. To ensure that no patient ever receives expired vaccine, always check the expiration date on the label prior to administering vaccine. Rotating stock within the refrigerator should also help as a double check.

Should you have any questions please contact the NESIIS Help Desk at 1-888-433-2510.
